

## Monarch Preschool

Monarch Preschool is an intensive, therapeutic, early childhood program for children ages 3 to 6 with a suspected or confirmed diagnosis of Autism Spectrum Disorder (ASD). Younger children are considered upon evaluation.

The program runs five days a week, ten and a half months a year. Students can attend full day or half day (morning or afternoon). Monarch is a provider for the Ohio Department of Education's Autism Scholarship Program, which may cover the cost of tuition.

Monarch Preschool employs a visual language immersion teaching model, which fosters meaningful communication and primary school readiness. Upon graduation, some students matriculate at their local school districts for kindergarten, some enroll in private schools, and others join Monarch School's kindergarten.

Each student at Monarch Preschool receives individualized instruction from a multidisciplinary early childhood team, which offers a high clinician to student ratio. Professional staff include: Director, Intervention Specialist, Speech & Language Pathologist, Occupational Therapist, Behavior Specialist, Art, Music and Recreational Therapists, and Associate Teachers.

## ADMISSION PROCESS

We recognize how difficult it can be to receive an autism diagnosis for your child. Thanks to our many years of experience, we know first-hand how important and beneficial early childhood education is for children with autism. To help determine if Monarch Preschool is the best option for your child, we use a comprehensive admission process that includes:

- Families are invited to tour our facility.
- We conduct a thorough review of all referral information.
- Our clinical team will meet with the prospective child and parents/guardian, as well as potentially observe the child at home, in a therapy session or at school.
- Families are introduced to our Parent Network.

## SETTING

Monarch Preschool is located in a secure campus-based facility, co-habitated by a neurotypical preschool. This affords Monarch Preschool students opportunities to socialize with neurotypically developing peers.

Monarch's classroom and outdoor playground are intentionally designed to create supportive learning environments that meet the unique sensory and processing needs of students with autism.

Technology is embraced through educational software, video modeling, web-based tools, a SMART Board, augmentative communication devices, iPads, and other mobile devices.

## MONARCH MODEL

Monarch Preschool's visual language immersion teaching model combines concept-driven language instruction, visual supports, technology, and Applied Behavior Analysis (ABA). Individualized visual supports are created and implemented for each student around three primary constructs: Visual Instruction, Visual Expression and Visual Organization.

## CURRICULUM

Monarch Preschool's curriculum is aligned with the Ohio Department of Education's Early Learning and Development Standards. Classes are taught in a natural environment and address social and play skill development, language-based communication, executive functioning, pre-academic skills, activities of daily living, fine and gross motor and imitation skills, sensory intervention, and behavior support. Students receive:

- Speech/Language Therapy
- Occupational Therapy
- Music Therapy
- Art Therapy
- Recreational Therapy
- Pre-Academic Skills
- School Readiness Skills
- Activities of Daily Living
- Sensory Intervention

## PROGRESS AND PLANNING

Student and program progress are continually assessed with a unique data collection system that measures performance through parameters of independence, accuracy, participation and behaviors. The results of these assessments are what drive planning for highly individualized educational and treatment plans.

## PARTNERING WITH FAMILIES

Monarch Preschool families receive daily communication, attend three meetings with teachers and therapists per year in addition to the IEP meeting, and may request home visits. Family networking and training sessions are also available.
